This clone is part of a collection of Saccharomyces cerevisiae
full-length ORF clones generated by the Harvard Institute of
full-length ORF clones generated by the Harvard Institute of
Proteomics Bach CDS has been cloned with its native stop-codon.
The CDS has been directionally cloned using the Gateway cloning
system into the donor vectors poons 201 or poons 221. Additional
system into the clone: 'TCCAGCTGACCACC' after the attl site as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Marsischky,G., Rolfs,A., Richardson,A., Kane,M., Baqui,M., Taycher,E., Hu,Y., Vannberg,F., Weger,J., Kramer,J., Moreira,D., Kelley,F., Zuo,D., Raphael,J., Hogle,C., Jepson,D., Williamson,J., Camargo,A., Gonzaga,L., Vasconcelos,A.T., Simpson,A., Kolodner,R., Harlow,E. and Labaer,J.

AA The present sequence represents the fungus-specific Candida albicans gene CaALRI. The present invention describes the fungus-specific genes CaKRES, CaALRI and CaCDC24 isolated in the yeast pathogen C. albicans. The genes have antifungal and fungicide activity. The genes in C. albicans and are useful as drug targets. Fragments of them are useful as probes and primers for diagnosis of fungal infections, also as antisense and ribozyme agents. Proteins encoded by the genes are used to screen for

Fragments of the proteins are also used to raise specific antibodies. Higher animals do not contain genes closely similar to the C. albicans genes, so antifungal agents that target them are less likely to be tox to humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

CC expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous CC promoter, (an) is useful for constructing a strain of diploid fungal CC cells in which both alleles of a gene are modified. The diploid fungal CC cells having both alleles modified are useful for identifying a gene that CC is essential to the survival or growth of a fungus, a gene that CC contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a fungus and for identifying a therapeutic agent for treatment of a mammalian CC disease. (M1) is useful for identifying a compound which modulates the CC carpiulty of a gene product, preferably enzymatic activity, carbon CC compound catabolism, biosynthetic, transporter, transcriptional, CC cranslational, signal transduction, DNA replication and cell division CC activity. The method is useful for identifying a compound having the CC ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of an CC essential Candida albicans gene used in the method of the invention. CC specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

CC treating or preventing a patthology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide CC sequences can be used in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the Creatment of cancer, hyperproliferative disorders, cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, CC osteoarthritis, neurodegenerative disorders, disorders related to organ CC transplantation, cardiovascular diseases, disorders related to organ CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious CC diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC diseases, autoimmune this flammatory eye disease. ORFX proteins are also CC useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut CC protection or regeneration and treatment of lung or liver fibrosis, CC reperfusion injury in various tissues and conditions resulting from CC systemic cytokine damage. N.B. The sequence data for this patent did not format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences 684 BP; 223 A; 105 C; 140 G; 216 T; 0 U; 0 Other; see Table 1 ρ.

ce essential genes of Aspergillus funigatus. The isolated nucleic colds of the invention are used to treat or prevent infections by a pathogenic corganism such as A. funigatus, to treat a non-infectious disease in a consequence of the comparising A. funigatus to treat a non-infectious disease in a consequence of the pathogenic corganism such as A. funigatus. The polymucleotides are useful for comparising A. funigatus. The polymucleotides are useful for comparising comparising or combinant protein for characterisation, screening or corganisms invade or reside, for comparing with the DNA sequence of a corganisms invade or reside, for comparing with the DNA sequence of a corganisms invade or reside, for comparing with the DNA sequence of a corganisms to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and comparing or or anticomparing with DNA comparing organisms to identify sequences or organisms to identify the same or expression patterns, for raising anti-protein antibodies, as an corganism to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an easy of identify inhibitors of the binding cours or to identify inhibitors of the binding cours or because of the protein organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence consecution of the essential consecution of the invention of the essential genes of Aspergillus funigatus of the invention The invention relates to novel purified or isolated nucleic acids of

Sequence 1992 BP; 458 A; 509 C; 525 G; 500 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
therapeutic use, as markers for host tissues in which the pathogenic corganisms invade or reside, for comparing with the DNA sequence of A. Comparing the barrier of the similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an antigen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding cours of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contannation of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New purified or isolated nucleic acids of essential genes of Aspergillus fumigatus, useful for treating or preventing infections by A. fumigatus, or for treating a non-infectious disease in a subject e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-093124/08

The polynucleotides are useful for monitoring the progress of fermentation and the growth conditions of a fungus, especially of Aspergillus oryzae which is widely used in industrial fermentation. Also monitoring for fungal contamination. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at form, but has obtained in electronic format directly from wipo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated DNA molecules comprising isolated genomic DNA sequences from the filamentous funghi Ashbya gossypii, the sequences comprising ADR01309, ADR01366, ADR01367, ADR01388, ADR01468, ADR01637, ADR02057, ADR02345 and ADR02369, chosen from 1047 disclosed genomic sequences. Also included is a cloning vector comprising a nucleotide sequence chosen from the above sequences. The novel Ashbya gossypii genomic sequences are useful for forensic identification, gene characterisation, for studying gene organisation by intergenomic comparison (with Saccharomyces cerevisiae), identifying blosynthetic genes for selectable markers, to isolate promoters/terminators/centromeres, chromosome mapping, and in identifying sequences unique to Ashbya gossypii for species identification. The present sequence is an A. gossypii novel genomic sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New gene for adenylate cyclase from Ashbya gossypii - useful for generating recombinant microorganisms with alteration in gene of cAMP-dependent signalling pathway for increasing production of fine chemicals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 3; SEQ ID NO 66; 632pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Filamentous funghi; ds; forensic identification; gene characterisation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
CC Sequences ABP31028-ABP35561 represent 4534 novel human proteins CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-CC ABN75587 represent cDNAs encoding them. The invention also encompasses CC DOLYPeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX CC polynucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polynucleotides and collectivity, and methods of screening for modulators of ORFX expression or CC polypeptides, methods of screening for modulators of ORFX expression or CC contity, and methods of screening individuals for a predisposition to an CC polypeptides, methods of screening individuals for a predisposition to an CC contity, and methods of screening individuals for a predisposition to an CC contity, and methods of screening individuals for a predisposition to an CC contity, and methods of screening individuals for a predisposition, CC chemokinetia activities, such as cytokine, cell proliferation, CC chemokinetic activity, haemostatic activity, thrombolytic activity, chemotactic/c chemokinetic activity, haemostatic activity, thrombolytic activity, receptor/ligand, antiinflammatory activity, thrombolytic activity, crecaptor/ligand, antiinflammatory activity, thrombolytic activity, the determination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopoiesis regulation; tissue growth; angiogenesis; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidiabetic; cytostatic; nootropic; neuroprotective; antieheroseleroric; anticoagulant; thrombolytic; cardiant; hypotensive; antithyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 24-MAY-2000; 2000US-0206690P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-MAY-2001; 2001WO-US017076.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200190366-A2

ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the
                                                                                                                                                                                                                                                                       Human; haematopoietic cell proliferation disorder; cytostatic; gene therapy; lymphocytic leukaemia; acute myelogenous leukaem cytosine methylation state; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of bodily characteristics, fertility and behaviour. ORFX proteins, nucleic acids and antibodies may be used in the treatment of cancers, other proliferative disorders such as psoriasis and benign tumours, neurological disorders such as epilepsy and Alzheimer's disease, cardiovascular diseases, immune system disorders, disorders related to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables highly specific classification of haematopoietic cell proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for detecting and differentiating between haematopoletic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent ti distinguishes between methylated and non-methylated CpG dinucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorders allowing
